

### Abstract

A wheeled walking frame (2) comprises a stand (4) provided with front wheels (16, 18), rear wheels (20, 22) and at least two grip parts (8, 10) for pushing the walking frame (2) in the walking direction (6). The grip parts (8, 10) can pivot out of a main position (I), in which they are essentially parallel to the walking direction (6), into a pivoted position (II) in which they are arranged essentially transversely to the walking direction (6).
